Become a Project Management Professional®

Open House Information Session

Mon., Sept. 8 • 5:30-7 p.m. • FCC Conference Center/Room E123

FCC's introductory Project Management Essentials course is one of the first steps to becoming a project manager. Discover the art and science of project management from a practical perspective while sharpening your leadership skills and determining if this is the right career path for you.

Designed for experienced project managers, our PMP® Exam Prep course provides essential tools and techniques to those seeking Project Management Professional (PMP)® certification, a globally-recognized and independently-validated credential. Impactful Project Management provides additional preparation by focusing on math skills while taking an in-depth look at critical elements including scheduling, budgeting and risk analysis. A new Microsoft Project scheduling course is also being offered.

Professional Development Units (PDUs) are available to certified professionals in our short-term courses. All classes taught in partnership with Leadership Techniques, LLC, a locally-owned and operated Registered Education Provider.

Join us at our Open House to meet our certified instructors, attend an informal presentation, hear student testimonials, discuss the benefits of certification and more.
