# MC-121 Pastry Kitchen

This kitchen is equipped with a PC, Audio/ Visual system and wall mounted **interactive display**. Microphones and a ceiling mounted video camera are available for recordings and virtual meetings as well. A lavalier and handheld microphone for voice enhancement are also available for use. The following instructions will allow you to operate and also connect any additional devices to the wall display.

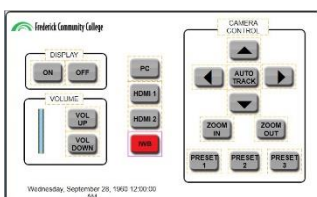

The controls to turn the display **ON** and **OFF**, **control the volume** and select your **video sources** are located on the wall to the left of the display. The PC is located **behind** the wall display on the left side of the screen. If an image of the PC start up screen is not visible on the display after selecting PC on the touch panel, check to see that the PC is powered up and indicator light is on. A wireless keyboard and mouse have also been provided.

After turning on the display, select the input source to the display by pressing the corresponding button on the control touch panel.

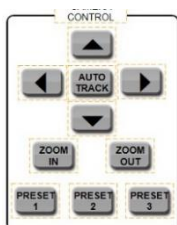

There are two additional HDMI ports to connect a laptop or other personal device to the display located on the wall just below the wall control touchpanel. After connections are made, touch the corresponding button **HDMI 1** or **HDMI 2** on the touch panel to show image on the display.

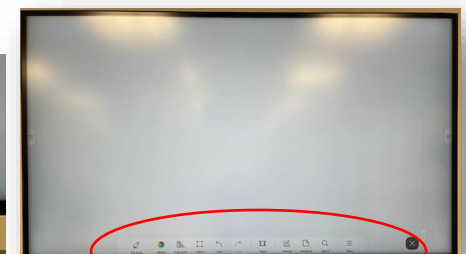

To use the interactive display features, select "**IWB**" on the control touch panel. You can now use the touch screen as an interactive white board.

Touching the small up arrow on the display will produce a toolbar from which you can select various tools or other interactive options the Samsung Flip offers. See reverse side for detailed instructions.

Controls to position the camera, zoom in or out and select preset workstations locations are to the right of the display functions on the control touchpanel.

The interactive display can be adjusted up or down for user preference. Slide it up or down to desired height.
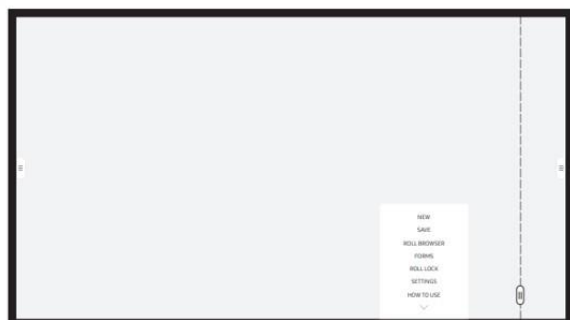

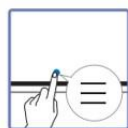

Pen Mode
Screen elements

1		Tap to open the IMPORT/EXPORT window. • IMPORT: View the screen of a mobile device or PC connected to the product, or import data such as images from a connected USB or network drive. • EXPORT: Share your creations in various ways.
